Writing

New technologies are amazing! For example, the internet, you can easily chat with your friends, family members or even meet with other people. Also, with internet you can entertain yourself by playing games or watching videos and many, many different ways. Mobile phone is like a computer with internet, but in your pocket. You can do with it everything I mentioned before, but to go, in social networking sites you can do photos of your life and show them to everyone. Actually, I think it's bad for your privacy, and everyone will know where you live for example, or what you did for example. These change I think, these inventions have lead to more freedom and freedom of expressions. You can say with your opinion easily and everyone will see it. Also, of course they can dislike or like your opinion, and even comment it. Also, forgot to mention with mobile phones you can chat with your friends without meeting them in real life. For example, you can plan your meetings with them or share your photos even if you're continent away from them. In social networking sites you have freedom of choice, you can hide your profile and no one will know what

~~anything~~ about you, or post photos everyday
and make your profile public. And last, but not least
with internet you can make your own sites. For
example cooking recipes site or social networking
sites.

I think these all new technologies will change
the world and our society and make it a better
place. Especially for next generations. That's all
I wanted to say.

Writing

Social media and all of the new technologies have changed our lives so much. I would like to start saying that it made things easier for people. It helps to find answers to your questions faster and you don't have to always bother specialist. AI can write whole essay about topic which you ask it for.

Technologies have also gave people so much forms of making money. You can start selling something and promoting it on social media, can help your small business growth. If comparing old times, when phones and computer's weren't that vital, we need more IT specialists that can help technologies growth.

By the way, sometimes all of this can become dangerous for your safety. Every day figers better and better and can take a lot of things. At first it was just photo, then voice and now people can even make take video of you doing something! you always have to be careful in this word before posting on social media something like your face or personal information.

Some of the internet sources are not properly taking care of you private information and it can go on the hands of people that are not supposed to have it.

If I had to talk about our lives, I would definitely say that technologies helped us grow and become more successful in things that older people could not do. We have more freedom in art; more plaser to work at and more things in entertainment industry. I am so happy that there are people who can make big updates in technology. People use it everyday and I think it is perfect. When talking about future, we are talking about ai, technology

and social media. I hope it can be more protected, give people more privacy
and keep helping us with everyday decisions
